Hello guys, Sky Valley is a blatant asset flip of Unity indie game [Flight Kit](#) created by [Dusty Room](#). Please go and report [Sky Valley](#) on it's official steam page so it will hopefully be removed.. Great game with a 1980 feel, especially if you're familiar with [Mario Bros](#).

Amazing music as well, as you collect pennies from defeated enemies (by throwing certain objects) while trying not to die.

EDIT: With the Deluxe version out, this game has turned into a masterpiece, adding in more maps, characters, and even bosses! (There's another type of POW block in there after beating the boss, but you'll have to find out yourself.). No point to the game.. Game will not launch for me. Developers suggest using the Beta branch on the forums.

Game will still not launch. I am on an Intel i7 4970k, Nvidia GTX 780, 16gb RAM, on Windows 10. I have the latest drivers and have had no problems with any of the other 600 games in my steam library.

To charge \$15 for this and to have people complaining of this issue (game not starting) for a month now is unacceptable from a developer or publisher.

If I get some solution in the support forums I'll update this review. But in the current state I cannot recommend a game that doesn't launch on a common platform.. An absolutely delightful platformer, I honestly can't recommend it enough. Gameplay is super fun, and there's a great pace to it as it steadily gets more and more difficult. It certainly is reminiscent of [Super Meat Boy](#), but I think [Slime-San](#) is different enough to stand strong on it's own. There's an incredible amount of content here for what it is, with plenty of extra modes like [Speedrunning](#) or [Boss Rush](#), plenty of ways to customize your game experience, plenty of diverse areas, unlockable arcade games parodying games that range from [Doom](#) to [Mario Kart](#), [New Game +](#), and a town & home to explore and encounter so many wonderful, charming, quirky characters. All of this in addition to the base game, 100 levels w/ 4 rooms each and some pretty dang cool bosses. To top it off, an incredible chiptune soundtrack. You can really feel the love the developers put it in. Seriously, you should get this game.. Not worth \$1, the game makes you move on a track, you have no freedom, the spells are boring, the animations are basic, the gameplay is unchallenging. Why would a consumer pay for this even in early access when they can have the same game with better quality and more roaming freedom in [spell caster](#)? Hopefully they add the freedom to move around more, being on a track is one of the most boring gameplay experiences imo.. worth the £1.99

its fun arcade type of game.. No Servers , no Devs , the game is dead.. I'm having fun.

This game becomes frustrating and tedious. Places to save are in such horrible places, if you die you are in a perpetual loop of dying. The controls are awkward, probably the worse game i've played in awhile. And, I wanted to like it, it draws you back just to see what happens next. But, only after you've left it and thrown your temper tantrums several times.. I love this type of construcion/modding games but didn't fully get it for this one. I won it on the first try by just adding all components that seemed useful to the ship until I ran out of space in the design-view...yeah... (Did I miss something?!)
I don't like the controls that much and will probably not play it again anytime soon.. Audience ♥
